Physiological Walking

Imagine keeping your body in shape from head to toe. Wearable Therapy Systems can do just that. We custom design neuromuscular stimulation to address muscle atrophy from paralysis, spasticity, joint stiffness and contractures, diminished circulation, as well as functional losses.

Custom-made

Each patient we treat is evaluated thoroughly so we can devise a system to fit you and your needs. Our Electrode Garments are made to stimulate the muscles that are important to you.

NeuroProsthetic Network

We have a growing, national network of certified NeuroProsthetists for consultation.

Pain Management

Chronic pain can be a major, disabling factor in SCI. Electrical stimulation for modulation of pain can be very helpful at reducing both musculoskeletal and neuropathic-related pain. Your physician should prescribe a pain evaluation to determine whether you are a candidate for our Wearable Therapy™ Pain Management System.
