**Wearable electronic  
muscle and nerve  
stimulation garments.**

## Licia Roberto C5-6 Quadriplegia

Licia was injured at age 27 in an auto accident. Since that time she's been training her body with several Wearable Therapy products, including BioShorts, BioBelt, BioSleeves for her legs and arms and a BioVest. These garments allow her to receive valuable muscle therapy at home to restore muscle strength and endurance, improve circulation, and to relax spastic muscles.

*"BIOFLEX is the way to go. I have all the Bioflex garments that give me a full body work-out and keep me in shape. I'm a C5 Quadriplegic and you wouldn't think I sit in a wheelchair!*

*After the car accident, I went into a funk. I lost my appetite and my muscles weakened. But after Philip from Bioflex fitted me with my Bioflex system, I was amazed by what my muscles were still capable of with stimulation. Now I'm exercising, eating healthy, toning up my body, and I'm back to the beach!*

*The shorts are amazing... I train 4 times a week and I have firmed up my legs so that they look full again. My abs... well, I have a 4 pack... almost a six pack. They have flattened and I no longer have a "quad belly" I have muscular calves. All in all I look fantastic, and all because of Bioflex. Their garments are the best exercise.*

*My body is in the same condition as it was before my accident. I look and feel great. If you look good you feel good, and you ooze confidence."*

*Licia is now happily married and living a healthier lifestyle in Cape Town, South Africa.*

**The Bioflex Wearable Therapy NMES System is an FDA allowed, Class II Medical Device and as such it is sold by or on the order of a physician. Systems are customizable to meet patient needs and criteria.**
